

THE TOOTH...AND NOTHING BUT THE TOOTH

~ DENTAL IMPLANTS AFFORDABLE ~

In the last few years Dental Implants have become more affordable as a treatment alternative for single or multiple missing teeth. "In most instances Dental Implants are the best overall treatment option for patients who are missing teeth". states Dr. Jay Knight. "Fortunately, the costs associated with the placement and restoration of the Implant and crown has become much more affordable for our patients". One cost benefit that Dr. Knight and Dr. Sapon provide and pass on to their patients is the ability to complete all of the necessary Implant procedures in office.

"Patients often times are referred out to an Oral Surgeon or Periodontist by their Dentist for the Implant placement". states Dr. Mark Sapon. "This may increase the overall costs for patients". "By placing and restoring all of our patients Implant needs in house it is much more convenient and a real cost savings for our patients". "Let's face it, all of us these days are still very concerned about costs" adds Knight. Unfortunately, patients often have to make tough and unfortunate decisions in life regarding their Dental health in order to meet other obligations.

Both Doctors utilize 3D-Cone Beam imaging in

the treatment planning process. This state of the art technology allows them to diagnose and treatment plan each patient to help ensure optimal success. "This amazing technology allows us to clearly analyze our patient's quantity and quality of bone" states Sapon. "This is a crucial step in treatment planning". When a patient loses one or more teeth the bone begins to melt away and will continue throughout their lifetime. One of the biggest advantages to placing the Implant is that the Doctors are able to maintain the patient's bone and their overall Dental health. The Implant also restores a patient's ability to chew, function, smile and often times restores their confidence.

"Through Dental Implants we are able to change our patient's lives by restoring their self esteem" says Knight. Many of the patients treated have been wearing dentures for years. They have had to deal with adhesives to help secure them in place and often times are not able to enjoy their favorite foods. "It's a great feeling to hear a patient come back in after treatment and say to us it is awesome to be able to eat an apple again". States Sapon. "That's what it's all about"
